Art Unit: 2115

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 9, 18, and 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Kulakowski et al., patent no. 6,418,535.
- 3. As per claim 9, **Kulakowski et al.** teach a software processing apparatus comprising:

an operating environment determining unit which determines an operating environment of a system (col. 3 lines 3 – 6, see Abstract, Fig. 1A, and Fig. 1B); and a switching unit (col. 3 lines 7 – 14) which performs switching between a process of heavy load on a processor (col. 3 lines 39 – 48) and a process of light load on the processor (col. 4 lines 43 – 50) in accordance with said operating environment (see Abstract, Fig. 1A, and Fig. 1B).

Art Unit: 2115

- 4. As per claim 18, since it recites the method of operation of the apparatus defined in the apparatus claim 9, it is rejected accordingly based on the rejection of the apparatus claim.
- 5. As per claim 29, since it recites the program that runs on the apparatus defined in the apparatus claim 9, it is rejected accordingly based on the rejection of the apparatus claim.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 1 8, 10 17, 19 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakaya et al., patent no. 5,949,484, and Kulakowski et al., patent no. 6,418,535.
- 8. As per claim 1, Nakaya et al. teach a software processing apparatus comprising: a battery monitoring unit which determines remaining amount of storage battery used for electric power source (col. 3 lines 18 21, Fig. 6, and Fig. 7); and

Art Unit: 2115

a switching processing unit which performs a process of heavy load in a first environment when the battery level is high, and performs a process of light load in a second environment requiring power saving when the battery level is low (col. 3 lines 25 –28, and col. 12 lines 9 - 15).

Nakaya et al. do not teach a software processing apparatus comprising:

an operating environment determining unit which determines whether an
operating environment requires power saving or not.

Kulakowski et al. teach an operating environment determining unit which determines whether an operating environment requires power saving or not (col. 3 lines 3 – 6, see Abstract, Fig. 1A, and Fig. 1B)

It would have been obvious to one of ordinary skill in the art to integrate

Kulakowski et al.'s operating environment determining unit to Nakaya et al.'s apparatus

so that the apparatus be able to determine whether the operating environment requires

power saving or not, and to perform a process of light load or heavy load accordingly.

9. As per claim 2, Nakaya et al. teach a battery monitoring unit which determines remaining amount of storage battery used for electric power source (col. 3 lines 18 – 21, Fig. 6, and Fig. 7); and

Art Unit: 2115

a switching processing unit which performs a process of heavy load in a first environment when the battery level is high, and performs a process of light load in a second environment requiring power saving when the battery level is low (col. 3 lines 25 –28, and col. 12 lines 9 - 15).

Nakaya et al. do not teach an operating environment determining unit which determines a status where the apparatus operates on an external power supply as said first environment, and determines a status where the apparatus operates on a battery as said second environment.

Kulakowski et al. teach an apparatus according to claim 1, wherein said operating environment determining unit determines a status where the apparatus operates on an external power supply as said first environment, and determines a status where the apparatus operates on a battery as said second environment (see Abstract, Fig. 1A, and Fig. 1B)

Commercially available portable electronic apparatus utilize both internal battery and external AC power as their power source. Kulakowski et al.'s apparatus is the evidence that there is a motivation to determine the type of power source supplied to the apparatus, to determine whether it is external power supply or a battery, in addition to the effort of determining the remaining amount of storage battery as in Nakaya et al.'s apparatus.

Art Unit: 2115

Therefore, it would have been obvious to one of ordinary skill in the art to integrate Kulakowski et al.'s apparatus to Nakaya et al.'s apparatus so that the apparatus would be able to determine its operating environment based on the status of the power supply being external power supply or a battery.

- 10. As per claim 3, Nakaya et al. teach an apparatus according to claim 1, wherein said processing of light load is a process obtained by simplifying said process of heavy load (col. 3 lines 48 56).
- 11. As per claim 4, Nakaya et al. teach an apparatus according to claim 3, wherein said simplified process is a part of said process of heavy load (col. 3 lines 48 56).
- 12. As per claim 5, Nakaya et al. teach an apparatus according to claim 3, wherein said simplified process is a process of using data obtained by processing data used in said processing of heavy load (col. 3 lines 48 –56).
- 13. As per claim 6, Nakaya et al. teach an apparatus according to claim 3, wherein said simplified process is another process realizing the same function as that of said process or heavy load (col. 3 lines 48 56).

Art Unit: 2115

- 14. As per claim 7, Kulakowski et al. teach an apparatus according to claim 1, further comprising a setting unit of setting the switching between said process of heavy load and said process of light load to be valid or invalid (see 98 in Fig. 5, and col. 5 lines 57 col. 6 lines 9)
- 15. As per claim 8, Nakaya et al. teach an apparatus according to claim 1, wherein said process of heavy load and said process of light load are performed by a processor (see Fig. 4, and Fig. 5), and said processor changes an operation clock frequency in accordance with load of a process (col. 3 lines 31 38).
- 16. As per claims 10 17, since they recite the methods of operation of the apparatus defined in the apparatus claims 1 8, they are rejected accordingly based on the rejection of the apparatus claims.
- 17. As per claims 19 26, since they recite the medium of operation of the apparatus defined in the apparatus claims 1 8, they are rejected accordingly based on the rejection of the apparatus claims.
- 18. As per claim 27, Kulakowski et al. teach other program, in addition to said program, which interacts with an operator and can override the power mode of operating environment determining program (col. 4 lines 53 64).

Art Unit: 2115

Therefore, Kulakowski et al. teach a recording medium according to claim 19, wherein said program is commonly used by other program and performs switching between said process of heavy load and said process of light load in response to a notification from the other program (col. 4 lines 53 – 64).

19. As per claim 28, Kulakowski et al. teach a recording medium according to claim 27, wherein said program determines the contents of said process of heavy load and the contents of said process of light load in accordance with the contents included in the notification from said other program (col. 4 lines 53 – 64).

Conclusion

- 20. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 21. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chi Whan Chung whose telephone number is (703)305-8788. The examiner can normally be reached on Monday~Friday 8:30am -4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Lee can be reached on (703)305-9717. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Art Unit: 2115

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-3900.
